Note: ASZ7.5

For the combination SIMATIC S5/S7 and position feedback message, we recommend actuators with DC 0...9.8 V feedback signals.

The signal peaks that occur in the potentiometer ASZ7.5 may result in error messages on Siemens SIMATIC.

This is not the case when combined with Siemens HVAC controllers.

The reason is that SIMATIC has a higher resolution and faster response time.

Notes

Engineering
SAV31.. and SAV81..

3-position actuators must have their own specific controller, refer to "Connection Diagrams" (page 8).

SAV61..

Up to 10 actuators can drive in parallel on a controller output with a rating of 1 mA. Modulating actuators have an input impedance of 100 kΩ.

Mounting

¹⁾ Only in connection with weather shield ASK39.1

During operation in heating installations the actuator consol, which is in contact with the hot valve, gets hot as well and can reach temperatures up to 100 °C.

When servicing actuators:

- Deactivate the pump and turn off the power supply
- Close the shutoff valves
- Allow pipes to completely cool down

Maintenance

The actuators are maintenance-free. Warranty

The engineering data specified in chapter "Combinations" (page 2) are only guaranteed in connection with the Siemens valves listed.

Note

When using the actuators in connection with valves of other manufacture, correct functioning must be ensured by the user, and Siemens will assume no responsibility.

Disposal

The device is considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.
